

ABSTRACT**A FEED METERING DEVICE**

5 A feed metering device for distributing fodder and/or drink in metered portions to an animal. The feed metering device is provided with a feed unit for containing fodder and/or drink, an entrance opening to the feed unit, and a feed supplying device for supplying an amount of fodder and/or drink to the
10 feed unit. The feed metering device is provided with a closing means that is movable across the entrance opening in order to deter an animal visiting the feed unit from taking fodder and/or drink. The closing means rotates about an axis, the closing means being driven by a roll that contacts the closing means,
15 which roll is driven by a motor.
